- Features: Structured workout programs, comprehensive meal plans, and a focus on community support.

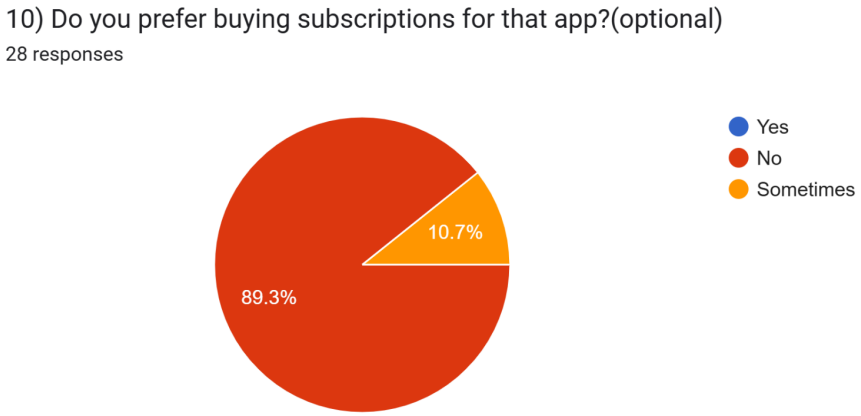

12. Big Fit Girl

- Services: Offers workouts suitable for women of all sizes, with live workouts

• Problem Definition:

1) What is the problem?
Around 50% users do not incorporate any fitness apps in their workout routines and almost 89.3% among them do not prefer buying a subscription.

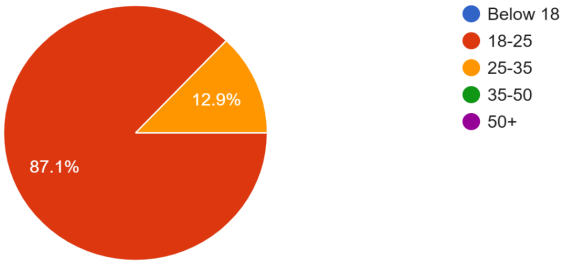

2) Who is facing the problem?
This problem is mostly faced by the user segment which falls between the age of 18-25 i.e the tech savvy

generation, residing in Tier-1 cities.They prefer cardio and machine training without a trainer.

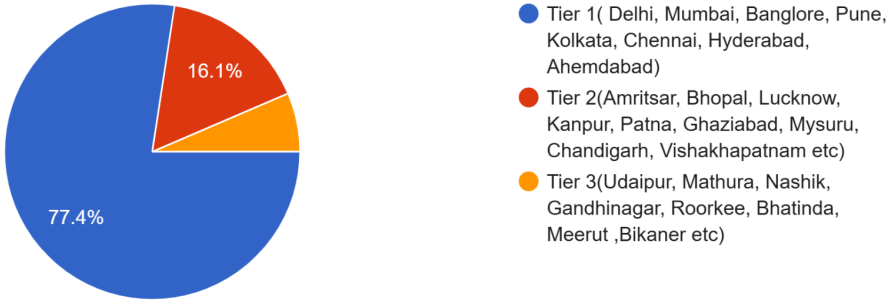

2) What is your age?

31 responses

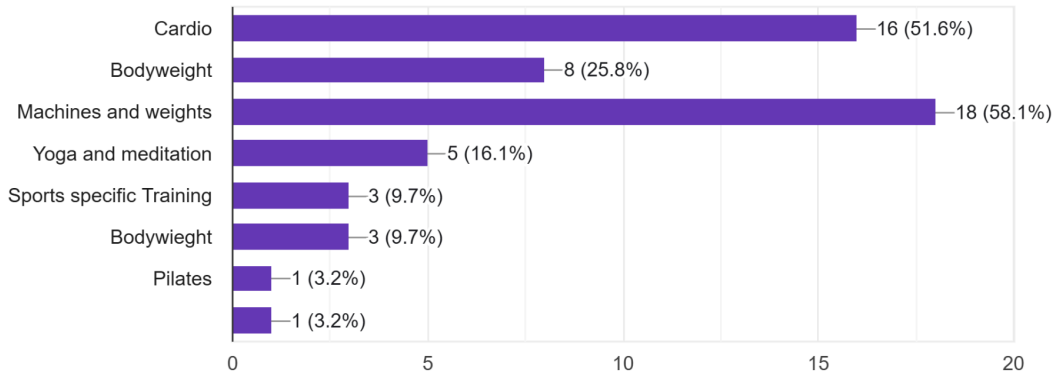

3) Which City do you belong to

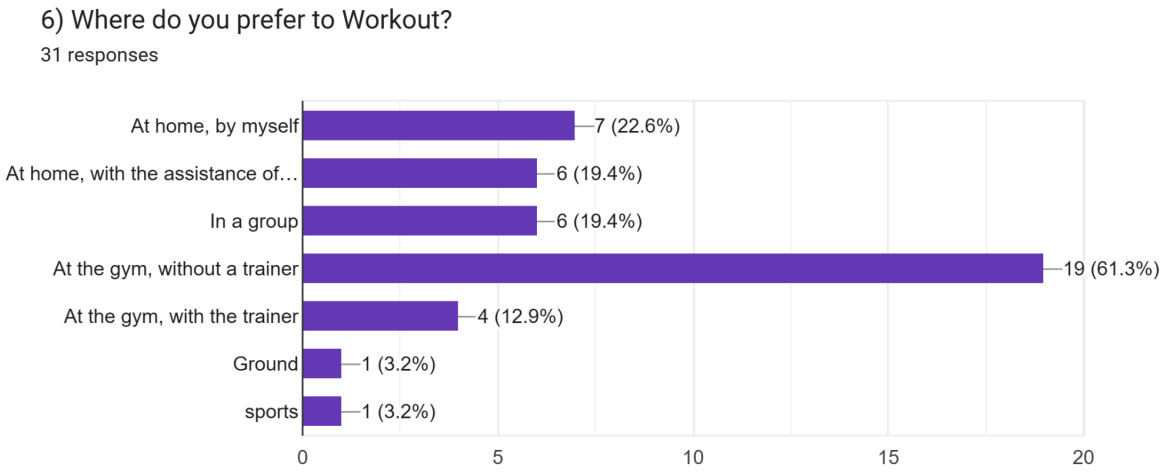

31 responses

5) What kind of workout do you prefer?

31 responses

- **Validation of the problem (Google form)**

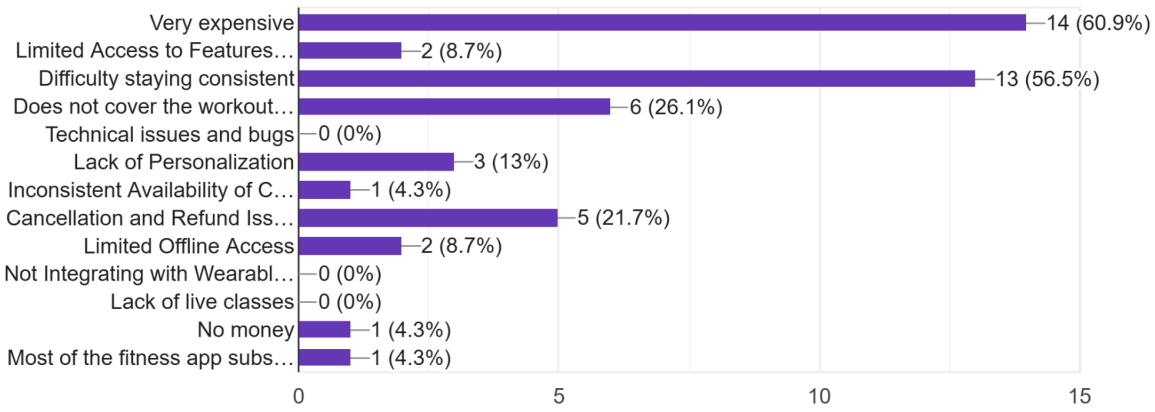

1) What is the true Problem?

The reason why people don't buy a subscription model is because they find it quite expensive and they are not willing to pay that cost if the app is not 100% personalized according to the user's needs.

User validation:Around 61% users find the subscription cost to be very high and 57% think that buying subscriptions does not help them to be consistent.

12) Reason for not buying the subscription?(optional)

23 responses

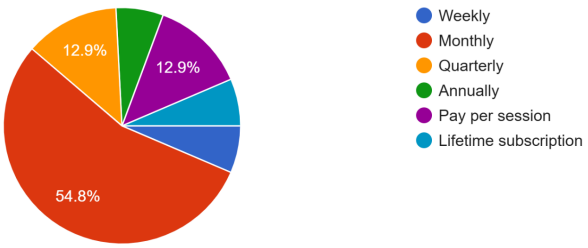

More User Insights:

The price range that users find convenient to pay and duration they prefer for buying the subscription is as follows:

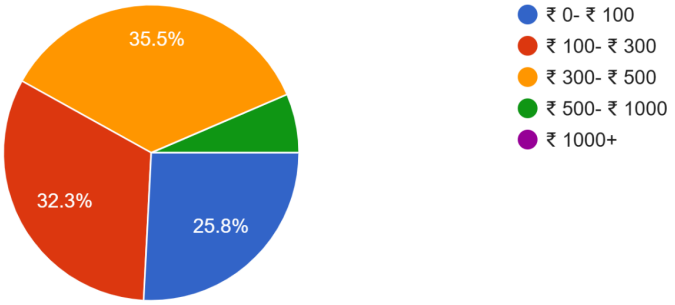

13) Which subscription model would you prefer if you were to buy/do buy it?

31 responses

14) What price range would you be willing to pay for a fitness app subscription on a monthly basis?

31 responses

2) How do we know it is the real problem?
   User interviews reveal the fact that fitness apps lack the personalization hence the users would much rather prefer using the free videos available online than paying for a subscription model.The user validation above proves the same

- User Persona:

  ❖ Dilip | 24 | SDE | Bangalore:
  He is a working professional doing a 9-5 job and barely find any time to focus on his fitness and does not workout at all
    - Pain Points- no time to workout, procrastinator, finds it difficult to trust a fitness app, needs step by step guidance to begin the journey.

  ❖ Rekha | 20 | Design College Student | Delhi:
  She is a student who wants to have an aesthetic body so that she can walk in fashion shows
    - Pain Points- Finds it difficult to remain consistent, no suitable tracker to help her measure the weight and overall fitness, no defined exercises for her to achieve her dream body, can’t spend a lot of money

3) Why solve it now?

Around 50% people still do not use fitness apps and 90% do not take the subscription so this is clearly an untapped market. Tackling this problem by thinking about a great solution will lead to us capturing majority of the market share and will increase the revenue

4) Value generated for users:
   It will increase convenience, accessibility, cost effectiveness and motivation.More users are willing to pay as they feel they are getting a fair price for a tailored experience.Users stay engaged longer because the app evolves with them, making workouts more effective. Users feel supported, reducing drop-out rates.It will also help them lead a healthy life.

5) Value generated for the business:
   Customer retention and loyalty will increase. The subscription will increase the revenue.By selling the wearables along with the subscription will drive up the revenue and eventually create a codependent ecosystem.

Possible Solutions

-Problem: Users feel that fitness apps are too expensive, especially when they don't provide a fully personalized experience.

Solution:

1)Tiered Pricing Model: Offer multiple pricing plans based on the level of personalization. Example:

- **Basic (Freemium)** – Limited workouts & general plans.
- **Premium (₹100-₹300)** – Access to structured workout programs but without deep personalization.
- **Super (₹300-₹500)** – AI-powered, 100% personalized plans, meal tracking, and habit coaching.

2)Pay-Per-Use Option: Instead of forcing a monthly fee, allow users to purchase workouts or meal plans individually.

3)"Earn Your Subscription" Model: Users can unlock discounts or free access by completing challenges, referring friends, or maintaining streaks.Also loyal users could further get discounts

-Problem: Many fitness apps provide generic workouts instead of adapting to users actual needs, making the subscription feel like a waste.

Solution:

1) AI-Powered Personalization: Use AI to create adaptive workout & nutrition plans that adjust based on:

- **User Progress** (strength, endurance, weight, etc.)
- **Personal Preferences** (gym/home workouts, equipment availability)
- **Health Goals** (weight loss, muscle gain, etc.)

2)Onboarding Assessment: A detailed yet fun questionnaire at signup to customize plans based on:

- Fitness level
- Available workout time
- Diet preferences
- Medical conditions/injuries

3)Dynamic Adjustments: Instead of static plans, allow **real-time adjustments** based on progress and feedback.For example: Workouts that evolve weekly based on user feedback.

-Problem: Apps lack human support, making users feel isolated in their journey.

Solution:

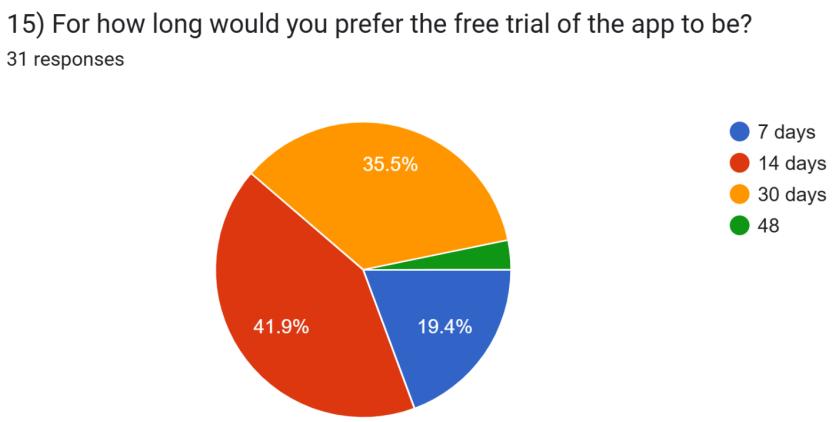

- **Hybrid Model:** Combine AI with real trainers for personalized Q&A sessions or video check-ins.
- **Community Challenges:** Social features like leaderboards, shared goals, or fitness duels with friends.
- **Accountability Buddy System:** Match users with similar goals to keep each other motivated.

-**Problem:** Users don't want to pay before they know the value of the app.

Solution:

- **Free Trial That Showcases Personalization:** Instead of a generic 7-day free trial, let users experience full AI-personalization for a limited period. Give away basic features for free but lock premium ones (e.g., AI coaching, advanced analytics, meal planning) under the subscription.

  Validation: According to the survey around 77% people want a 14day+ trial in order to completely trust the product

-Problem: People quit because they lose interest in repetitive or generic routines.

Solution:

- **Gamification:** Incorporate streaks, badges, challenges, and rewards for consistency.
- **Adaptive Music & Coaching:** AI-generated motivational messages & music recommendations based on user mood.

-Problem: Users don’t see tangible progress and lose motivation.No Clear ROI (Return on Investment)

Solution:

- **Visual Progress Tracking:** AI-generated **before/after body visualizations** based on their logged data.

- **Smart Notifications:** Send **weekly progress reports** with small wins (calories burned, workouts completed, weight changes).
- **Success Stories Section:** Inspire users with transformation stories and real testimonials.

Feature Prioritization using MoSCoW

Must Have: 1)AI- Powered personalization 2)Dynamic Routines 3)Onboarding Assessment 4)Free Trial That showcases personalization 5)Tiered Pricing Model	**Should Have:** 1)Smart Notifications 2)Dynamic Adjustments 3)Community Challenges 4)Success Stories Section
Could Have: 1) Visual Progress tracking 2)Gamification 3)Earn your subscription	**Will not Have:** 1)Adaptive Music and Coaching 2)Pay per use 3)Hybrid Model 4)Accountability buddy system

RICE PRIORITIZATION

(Must Have features)

Solution	Reach (/ 5)	Impact (/ 5)	Confidence (/ 5)	Effort (/ 5)	Score (R*I*C/E)
Dynamic Adjustment	4	5	4	3	26.6
AI Personalization	4	5	5	4	25
Tiered Pricing Model	4	3	3	2	18
Free Trial That showcases personalization	5	4	3	4	15
Onboarding Assessment	5	5	5	2	62.5

According to the rice prioritization framework we can conclude that Onboarding Assessment, dynamic adjusting and AI personalization are the required features needed with their high importance in respective order.

MVP-1

MVP Goal

To increase user engagement and conversions through AI-powered personalization and a tiered subscription model while ensuring an optimized onboarding experience.

Key Features:

- Onboarding Assessment - When the new users/ churned users/ inactive users join a small 2 minute quiz will be conducted in order to understand the users goals and pain points.
  - Simple multiple-choice quiz (2 mins)
  - Collect fitness goals, dietary preferences, pain points, schedule availability
  - Store data to feed into AI model

- New Users will be given a 14 day trial with limited features which include all basic features with partial personalization.
  - Basic workout routine,standard meal plans, limited AI adjustments (weekly instead of real-time),progress tracking (basic)
  - Call-to-action (CTA) for upgrade after trial

- ❖ AI Personalization-The data gathered above will then be fed into the AI model and accordingly AI based workout routines, diet plans, schedule planner etc will be executed to make the app super personalized and engaging.
- ❖ Dynamic Adjusting- It is the ‘Maintainence Feature’ of the app which will auto update all the AI planned routines by tracking all the metrics and user engagement patterns. The trial period of 14 days will also include this feature.
- ❖ Tiered Pricing Model- After the user is open to buying subscriptions,the tiered model will be executed with limitations and rewards.
  - ➢ **Basic Tier** (Freemium)
    -Limited AI personalization (weekly updates)
    - Basic workout + diet plans
    - Progress tracking

  - ➢**Premium Tier (₹100-300/month)**
    - Full AI personalization (real-time)
    - Unlimited plan adjustments
    - Exclusive workouts & nutrition tips
    - 1-on-1 AI coaching

  - ➢**Super Tier (₹300-500/month)**
    - All premium features
    - Advanced analytics & reports
    - Live trainer access

Success Metrics (MVP Validation)

1)User Engagement: % of users completing the onboarding quiz
2)Trial-to-Paid Conversion: % of users subscribing after the trial
3)Retention Rate: % of premium users staying after 1st month
4)Feature Adoption: How many users use AI personalization & dynamic adjustments
