1 · THE OPPORTUNITY

Instagram inspires shopping. Product access is still a detour.

When creators ask viewers to “comment LINK,” interested shoppers can lose momentum before reaching a product.

Shopper · primary target

Pain: indirect links, public comments, missed DMs

Need: private, instant product access

Creator

Pain: interested viewers may drop off before the item

Need: trackable, seamless referrals

Vendor / Brand

Pain: buyers may never reach the right listing

Need: qualified visits and purchases

Watch Reel → Comment “LINK” → Wait for the DM → Find the DM → Retailer, Buy

Today’s journey. Friction: comment, wait, find the DM

Aditi, 22 · The discreet shopper

Follows fashion and beauty creators and their Reels.

Drops off before the request

- A public comment exposes her
- May comment, delete it, or skip
- Public asking feels performative

Need

A private way to get the exact item

“I want the product link, not a public comment.”

Meera, 35 · The lost-link shopper

Watches product Reels; unfamiliar with comment-to-DM.

Drops off after the request

- Unaware a comment triggers a DM
- DM may sit in Message Requests
- Doesn’t know where the link went

Need

A visible, obvious route in the Reel

“If I like it, just show me where to get it.”

Insight: interest is created in the Reel; access to the product should happen there too.

Metric: Attributed Purchase Conversion Rate (PCR) = unique exposed shoppers who buy ÷ unique eligible shoppers exposed

Personas are hypotheses; purchase attribution needs integration.

2 · THE DECISION

Three ways to shorten the path from recommendation to purchase.

1 · Private Link CTA

Tap “Get link” → receive DM → open retailer

Shopper: no public comment

Creator: simpler link requests

Vendor: more visitors reach product pages

Private, but still DM-dependent.

2 · Shop This Reel · PICK

Tap “Shop This Reel” → view featured products → open retailer

Shopper: private, obvious, no DM

Creator: creator note, measurable referrals

Vendor: qualified clicks to exact products

Direct, private, visible at the moment of interest.

3 · Creator Picks Shelf

Visit profile → browse recommendations → open retailer

Shopper: easy return to past picks

Creator: picks stay discoverable

Vendor: longer-tail referral traffic

Great for rediscovery; weaker in the moment.

RICE prioritisation (illustrative)

Idea	Reach	Impact	Confidenc	Effort	Score
1 · Private Link	850	1	70%	2	298
2 · Shop This Reel	700	2	70%	3	327
3 · Creator Shelf	450	1	55%	4	62

Score = Reach × Impact × Confidence ÷ Effort. All inputs are illustrative assumptions.

Why #2 wins: it removes both barriers, the public comment and the DM hunt, at the moment of intent.

Trade-off: 327 vs 298 is close. Real adoption and effort could flip it, so validate first.

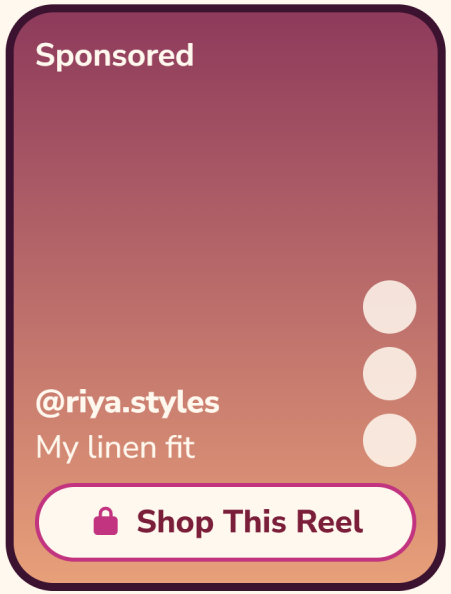

Pick Shop This Reel: it solves privacy and lost-link friction.

Not now: AI concierge, in-app checkout, all-Reels rollout.

3 · THE EXPERIENCE AND VALIDATION

Direct product access, without comments or DMs.

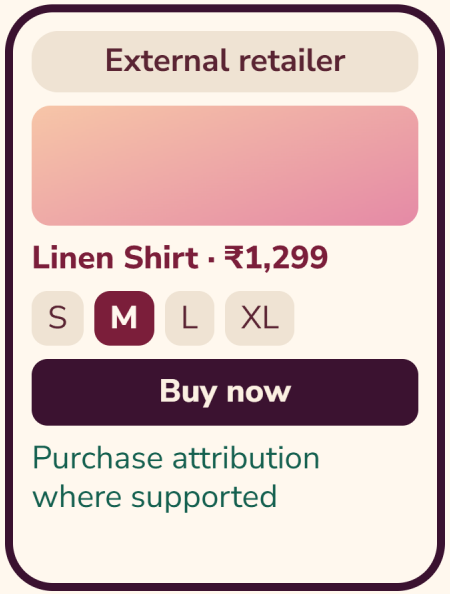

Creator Reel → Shop This Reel → Vendor page → Purchase

01 · See product

02 · Browse directly

03 · Buy with vendor

Before

Reel → Comment → Auto-DM → Find DM → Retailer

After

Reel → Shop CTA → Product panel → Retailer

A/B test

Viewer-level: current experience vs direct product panel

Access starts with one tap; the purchase is completed on the vendor site. Screens and sample data are illustrative.

PRIMARY METRIC

Attributed Purchase Conversion Rate

Unique exposed shoppers who buy ÷ unique eligible shoppers exposed

SECONDARY METRICS

- Shop CTA tap rate
- Successful PDP visit rate
- Creator tag adoption

GUARDRAIL METRICS

- Reel watch time
- Broken or wrong links
- Hide / report rate

ASSUMPTIONS

1 · Personas unvalidated
2 · Accurate vendor links
3 · Attribution available
4 · Consistent window
